Answered I have an LG G2 that I mostly use on Wi-Fi in my office or at home. In both places I see a bug icon several times saying REG09 Missing 911 Address. When it's up it disables the Wi-Fi call and uses normal radio. A few times if I turn off and on a Wi-Fi call, Wi-Fi radio, or the phone bug itself will disappear. I tried following the phone's instructions for registering an address associated with the Wifi location for 911 but it wants a tmobile account to do it. This will not allow me to make a mobile account because I do not have a tmobile phone number. What can I do? If you're having trouble using Wi-Fi, we can help. Read me first Let's check your Wi-Fi network: Make sure other devices can connect and use the Wi-Fi network. Make sure your Wi-Fi password is correct. If you're not sure, get a new network password. Some public networks have an login page that you need to go through before using Wi-Fi. Check the alerts and open the browser to see if it redirects you. Change the type of network security your computer has to the one that supports the device, or turn it off. Make sure the router has the latest software and is connected to the modem. Run a Wi-Fi speed test in . If the speed is below 0.25 Mbps, the problem is the Internet connection. REG09: No 911 address error you have to set up an e911 address on my T-Mobile to use a Wi-Fi call. Check the Billing Change and e911 address. Tip: If you need help with any of these steps, visit our device tutorial page, select your device and use the search bar in the top right right to find what you're looking for. Use these steps to make calls or browsing when you're connected to Wi-Fi. Turn off the Wi-Fi and check the problem. If you still have a problem check our other troubleshooting documents. Check out the following: You recently restarted the device. Find out why it's important to restart your device regularly. You're connected to Wi-Fi. You are within 15 feet of the router. You don't have a firewall on. You're not near anything that can cause Wi-Fi interference, such as 2.4Ghz baby monitors or wireless phones, and some Bluetooth-enabled devices. Turn off all battery-saving or energy-saving features on your device. Remove downloaded apps that can manage or explore Wi-Fi networks. The device's software update to the latest version. If your device uses Wi-Fi 1.0, you must have an active T-Mobile SIM in your device to use a Wi-Fi call. If you have access to network hardware, turn off the router and modem. Wait 30 seconds and turn on only the modem. As soon as the modem shows that it has installed an Internet connection, router and make sure it connects to the modem. Delete/forget your Wi-Fi profile from your device. Turn off the device for 30 seconds and then turn it back on. Reconnect to add a Wi-Fi network. Android Devices: Wipe the cache section. Apple Devices: Turn off Wi-Fi Help. Rebooting the network In the settings of the total ggt, reset the reset of the reset network. Make sure T-Mobile Carrier Settings are up to date. See Apple's support. Still needing help? If you still have this problem, the problem may be with the network or device. Try contacting your provider and then call us at 1-877-746-0909. It is best if you can call from another phone than one that you are having problems with, you can also schedule a call back or send a message to us within the available hours. The purpose of this disclosure is to inform Ultra Mobile customers of any differences between 911 access capabilities and E911 access available through ultra Mobile's Wi-Fi 911 Service compared to the 911 and E911 access capabilities available with traditional wired telephone service. It's important that you understand how these differences affect your ability to access 911 and E911 services. We ask you to read this disclosure carefully. If you have any questions or concerns about the information contained in this notice, or if you do not understand anything that is discussed in this notice, please contact our Customer Service Division at (888) 777-0446. ULTRA MOBILE IN WI-FI 911 SERVICE MAY NOT OPERATE DURING POWER OUTAGE. You recognize and understand that the 911 Wi-Fi service does not work in the event of a power failure or failure. In the event of a power outage at the Wi-Fi location, Ultra Mobile's Wi-Fi service, including Wi-Fi 911 Service, will not be operational until power is restored. A power failure or failure may require the customer to reset or reconfigure equipment before using Ultra Mobile, including the 911 Wi-Fi service. We strongly recommend that customers have all the equipment on long-term UPS systems, have a land line also in your room that can be used, and have an excess or backup internet connection. You are responsible for ensuring a smooth backup power if you want to ensure that the electrical equipment continues in the event of a power outage. ULTRA MOBILE WI-FI 911 WON'T WORK IF YOUR WI-FI CONNECTION IS BROKEN. You recognize and understand that service outages or terminations of service by your broadband provider and/or provider or Ultra Mobile will prevent you from using Ultra Mobile Wi-Fi, including Wi-Fi 911. A service failure for any reason other than a service suspension will prevent you from using Ultra Mobile Wi-Fi, including Wi-Fi 911. Once your Wi-Fi connection and/or Ultra Mobile call service has been restored, you may need to reset or reconfigure your hardware before you can use Ultra Mobile Wi-Fi to contact 911 and E911. YOU MUST PROVIDE ULTRA MOBILE WITH THE RIGHT SERVICE ADDRESS OR ON 911, THOSE MADE WITH ULTRA MOBILE WI-FI 911 SERVICES CAN BE ROUTED TO EMERGENCY PERSONNEL WHO CANT HELP YOU. When dialing 911 with the help of Mobile Wi-Fi 911 Service, your call is routed from the Ultra Mobile provider network to the Public Safety Response Point (PSAP) or the local emergency operator assigned to the address you listed at the time of activation (your Registered Address). You recognize and understand that when you dial 911 from your Ultra Mobile device, it is intended that you will be directed to a shared phone number for PSAP or a local emergency services provider (which cannot be answered outside of work time in certain areas) and may not be directed to 911 dispatchers (s), which are specifically designed to receive incoming 911 calls using the traditional 911 dial. Ultra Mobile relies on third parties to overflight basic routing information, and Ultra Mobile and its third-party provider (s) are therefore not liable or liable if such information or routing is incorrect. If you notice that the location information identified in your contract or account is inaccurate, you can correct your service address by updating your account preferences by calling www.ultramobile.com or by calling our Customer Service representatives at (888) 777-0446. ULTRA MOBILE CALLS TO WI-FI 911 MAY NOT END OR BE REFERRED TO EMERGENCY SERVICES WHO WILL NOT BE ABLE TO HELP IF YOU DISABLE, DAMAGE, OR MOVE THE EQUIPMENT TO A LOCATION OTHER THAN THE SERVICE ADDRESS YOU PROVIDED TO ULTRA MOBILE WHEN THE SERVICE WAS LAUNCHED. You recognize and understand that 911 and E911 do not function if you move your Ultra Mobile device to another street address, unless and until you have notified Ultra Mobile of any such changes to your registered address. You also acknowledge that it can take up to 2 hours to process any changes to the address. Accordingly, you must notify Ultra Mobile in advance of any changes to your registered address. Undo the current and correct physical address and location of your Ultra Mobile device can result in any 911 call you make being sent to the wrong local emergency and emergency services provider sent to the wrong location. If you would like to go to a new service address or report damage to Ultra Mobile equipment, please update your preferences at www.ultramobile.com or call our customer service representatives at (888) 777-0446. EMERGENCY SERVICES MAY NOT BE ABLE TO IDENTIFY YOUR PHONE NUMBER TO CALL YOU BACK. You understand and acknowledge that it may not be possible for the Public Safety Point (PSAP) and local emergency personnel to determine your phone number when dialing 911 using Ultra 911 Wi-Fi 911 Ultra Mobile is configured in most cases to send automated identification information by numbers; however, one or more telephone companies are transporting to PSAP. The PSAP itself should be able to receive information and transmit it properly, and PSAPs may not be technically technically do so on a permanent basis. You recognize and understand that PSAP and emergency services may not be able to identify your phone number to call you back if the call cannot be completed, deleted or disabled, or if you are physically unable to tell them your phone number, and/or if your Ultra Mobile Wi-Fi 911 service is down for no reason other than suspending service. EMERGENCY SERVICES WILL NOT BE ABLE TO IDENTIFY YOUR ADDRESS IF YOU USE YOUR EQUIPMENT AT AN ADDRESS NOT REGISTERED AT THE ADDRESS. If and as long as it is technically possible to automatically transmit the address from which 911 and E911 call is occurring, you should be able to find out your location and the nature of your emergency if you use your Ultra Mobile Wi-Fi call service to call 911 from any address other than your registered address, as PSAP and emergency personnel will not have address information. You recognize and understand that PSAP and emergency services will not be able to locate your location if the call cannot be completed, discarded or disabled if you are physically unable to tell them your location, or if the service is not working for any reason other than suspending service. CALLS TO ULTRA MOBILE WI-FI 911 MAY BE DELAYED OR DELETED DUE TO NETWORK ARCHITECTURE. You understand and recognize that due to technical limitations, there is a high probability of network overload and/or reduced speed in routing the 911 call made using your Ultra Mobile Wi-Fi call service compared to the traditional 911 set on traditional public phone networks. You acknowledge and understand that a 911 call from your Ultra Mobile equipment will be directed to the general phone number of a local emergency services provider (which cannot be answered during business hours in some areas) and will not be directed to a 911 (s) dispatcher, which is specifically designed to receive incoming 911 calls at local provider establishments where such calls are routed using traditional 911 dials. You recognize and understand that there may be a greater chance that a shared phone number for a local service provider will produce a busy signal or take longer to respond, compared to those 911 calls routed to a 911 dispatcher (s) that are specifically designed to receive incoming 911 calls using the traditional 911 set. IN ADDITION, YOU MUST MAINTAIN ALTERNATE MEANS CONTACT 911 AND E911 SERVICES. You recognize that Ultra Mobile does not offer primary line or rescue services. You should always have alternative means of accessing emergency services using traditional 911 or other emergency alert services!
